

Data Dictionary

Market Women Waste Disposal & Disease Risk Dataset | 2,000 Records | 15 Columns

Column Name	Type	Description	Possible Values	Scale
Respondent_ID	Text	Unique identifier per respondent	MW-00001 to MW-02000	Primary Key
Age	Integer	Age of the market woman	18 – 64	Continuous
Education_Level	Text	Highest level of formal education	No Formal, Primary, Secondary, Tertiary	Ordinal
Income_Range	Text	Monthly income bracket in Naira	< N20k, N20k-N50k, N50k-N100k, > N100k	Ordinal
Primary_Disposal_Method	Text	Main method used to dispose of waste	Dumped into river, Open burning, Municipal bin, Left on ground, Buried	Categorical
Waste_Type_Generated	Text	Type of waste generated at stall	Food, Plastic, Liquid, Mixed, Organic	Categorical
Proximity_to_Water_Body	Text	Distance to nearest river or stream	< 50m, 50-100m, 100-200m, > 200m	Ordinal
Reported_Illness_Last_3_Months	Binary	Whether respondent reported illness in last 3 months	Yes / No	Binary
Type_of_Illness	Text	Type of illness reported	Cholera, Typhoid, Diarrhea, Skin Infection, None	Categorical
Perceived_Disease_Risk_Level	Text	Respondent's self-assessed disease risk	Low, Medium, High	Ordinal
Handwashing_Frequency	Text	How often the respondent washes hands	Always, Sometimes, Rarely, Never	Ordinal
Access_to_Clean_Water	Binary	Whether respondent has access to clean water at stall	Yes / No	Binary
Hygiene_Knowledge_Score	Integer	Score reflecting hygiene awareness and knowledge	1 – 10	Continuous
Received_Intervention	Binary	Whether respondent received a targeted hygiene intervention	Yes / No	Binary
Disease_Incidence_Reduced	Text	Whether disease incidence reduced after intervention	Yes, No, N/A	Categorical

Dataset contains 2,000 synthetic records modelled after a survey of 150 market women. Disposal method and proximity to water body are weighted to reflect realistic disease risk patterns.
